HISTORICAL APPENDIX · EARLIER CONFIGURATION

Earlier AutoGluon / Kumo target trial

Completed results on the earlier Test window.
The current GPU8-date experiment is a separate run.

TEST ENTRIES	2025-10-09 – 2026-01-18
TRAIN ENDS	2025-05-30 · validation ends 2025-10-01
STATUS	24 / 24 fits received · saved results retained without changing their values
CURRENT DECK	prendinger_brief.pdf / main.pdf · GPU8 Test: 2026-01-08–2026-07-18

COMPLETED EARLIER-DATE TRIAL · DESIGN

Two backends, six targets, one execution policy

AutoGluon and Kumo · separate UP / DOWN fits in every cell · 24 fits in total.

Backend	TP	TB ref	k = 0.5	k = 1	k = 1.5	k = 2
AutoGluon	UP / DOWN	UP / DOWN	UP / DOWN	UP / DOWN	UP / DOWN	UP / DOWN
Kumo	UP / DOWN	UP / DOWN	UP / DOWN	UP / DOWN	UP / DOWN	UP / DOWN

Use the saved run's dates

Frozen Kronos calls · 20 source assets · 1d
Train: 2024-07-01 – 2025-05-30
Validation ends 2025-10-01 · cost 0.2%

Keep a matched control

TP = original fixed-horizon baseline
TB ref = TP labels with TB's history filter
k changes labels; trades still exit at day 7.

The TB history filter removes **77 early TON training calls** (13 UP, 64 DOWN). Compare k with the **same backend's TB reference** to isolate label effects; retain original TP as the reproduction anchor.

Saved run config; data ends 2026-01-25 · utility_nocal · 24 / 24 fits received. These are the earlier cutoffs, before matching the current GPU8 config.

COMPLETED EARLIER-DATE TRIAL · BASELINE

The earlier UP M1 baseline is reproduced

Test entries: 2025-10-09 – 2026-01-18 · fixed-horizon TP labels · net returns.

Side	Strategy	Return	Sharpe	Max drawdown	Coverage
UP	M1 · all calls	1.8%	0.56	−13.57%	100%
UP	AutoGluon · TP	6.47%	1.02	−12.88%	87.16%
UP	Kumo · TP	9.24%	0.98	−20.53%	42.95%
DOWN	M1 · all calls	59.68%	4.93	−9.33%	100%
DOWN	AutoGluon · TP	112.69%	5.95	−1.87%	49.47%
DOWN	Kumo · TP	99.41%	5.35	−6.28%	16.84%

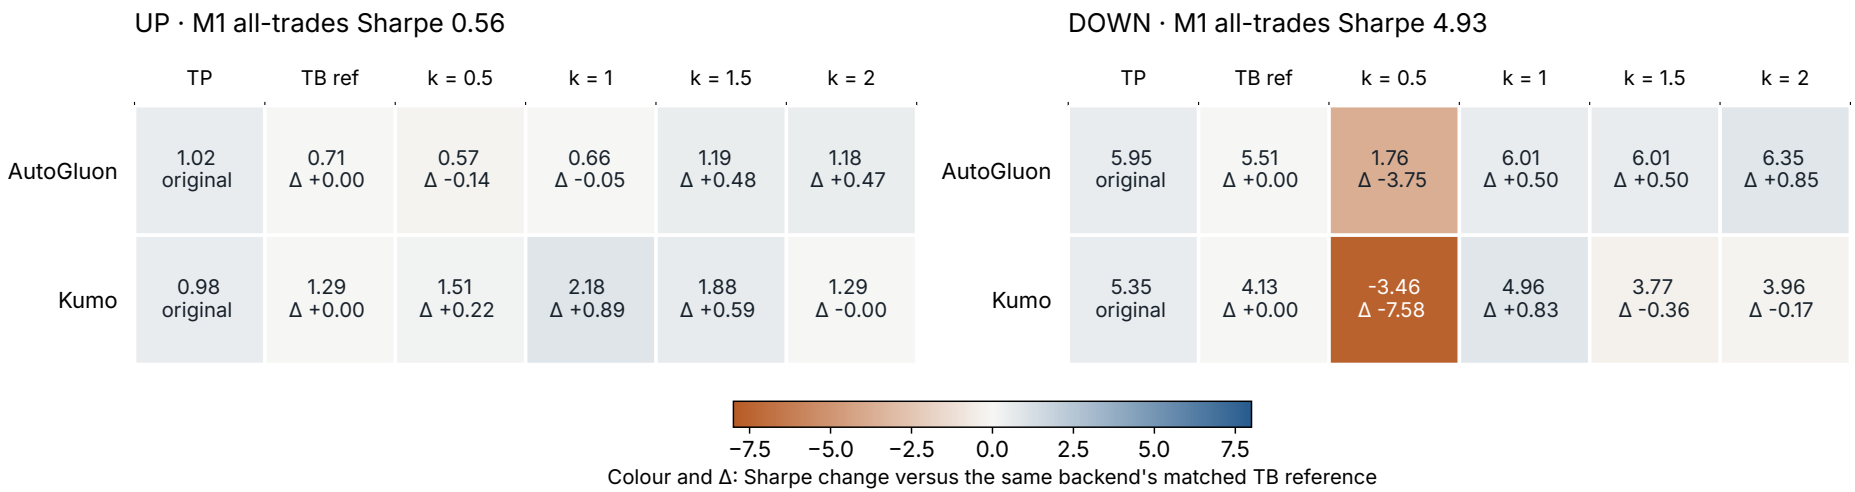

UP M1: **Sharpe 0.5625**, **return +1.80%** — the earlier repo baseline. DOWN is a different set of proposals in a favourable short-selling window; compare targets within each direction.

Saved Test summaries; original spread-equity engine. 14 non-overlapping 7-day returns; annualization ×√(365.25/7). Short-window, exploratory estimates.

COMPLETED EARLIER-DATE TRIAL · TARGET COMPARISON

Does TB help the same backend?

Test entries: 2025-10-09 – 2026-01-18 · 24 / 24 fits received.

Cell: **Test Sharpe**. Δ and colour: change versus the same backend's **matched TB reference**.
A positive difference is descriptive evidence on this window; it is not a confidence interval or confirmation of a selected k.

Original Test path; M1 trades, fees, metrics and features checked across received fits. Updated 2026-10-27 12:55 UTC. The earlier training-tail validation chart is withdrawn: its cutoff was selected on later dates.
